

Trust ≠ Crowdfunding

Naima

An open, transparent and trustworthy nonprofit service, supporting social enterprises and changemakers based on Blockchain

https://www.aidcoin.co https://www.provenance.org

What's our USP?

THE ISSUE : TRUST

Social fundraising is not trusted by most of the people whom would be able to give support and to invest money.

58% agreed with the statement that charities spend too much of their funds on salaries and administration.

Of the people in the sample who said that their trust and confidence in charities had decreased over the last years, the most frequently mentioned reasons were:

- media coverage about how charities spend donations (22%)
- don't trust/them/don't know where the money goes/waste money (22%)
- media stories about charities generally (21%)

Transparency Service

The feature is offering users a total transparency of where the funded money is going, used to or spent for.

Our target are Fundraising platforms, governments etc., working in a Open Source context.

Small fundraising companies need to address transparency and trust concerns.

They have a need for an easy-to-use, affordable solution.

Usability

Accessibility means our API is easy to understand and easy to implement

Maintaining and updating the documentation will enhance usability as the product grows

User perspectives

Documentation for different proficiency levels

Can we maintain our documentation in several languages as we grow?

Consider the implications of different programming languages

Promotional Plan

Promotion on

- Fundraising Platforms
 Better Place
 Crowdfunding.de
 Eventbrite
- Reddit
- Factory Berlin Coworking Community in Tech,
 Politics, Arts and Science

Future Project Timeline

Expanding in Germany within 6 month in Europe within 1 year and Worldwide within 2 years

Great benefit from
 Not depending on any language
 Open Source
 Easy to implement

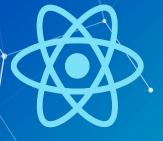

BigChainDB

A scalable database with blockchain characteristics offering decentralization, immutability and native assets.

File System
A protocol and
network designed
to create a content
addressable, p2p
method of storing
and sharing
hypermedia

REACT JS

A declarative, efficient, and flexible JavaScript library for building user interfaces.

NAIMA TESTNET

We created our BigchainDB Test
Network (or "Testnet") using a

Docker container and AWS

(Amazon Web Services)

The landing page is also hosted on AWS and secured with LetsEncrypt certificate

THE PROCESS

CONTINUOUS INTEGRATION

Creating and expanding the infrastructure and functionality.
